## High-Volume, Multi-Building Torque Calibration Simplified with ICS Onsite Team and ICS Live Integration

A leading automotive manufacturer developing self-driving technology required calibration of over 400 torque devices across four separate buildings.

## The Challenge

- 1 400–500 torque devices needing calibration in a short time
- 2 Multiple departments/buildings added logistical complexity
- 3 Needed to minimize equipment downtime
- 4 Required organization of tool return per department

## The Opportunity

ICS onsite torque calibration deployment with:

- Scalable personnel
- Mobile tooling and tracking
- Integration with ICS Live for departmental asset tracking

## The Solution

- 1 A team of technicians was sent for a week-long onsite calibration blitz
- 2 Tracked and tagged equipment per building and department
- 3 Used ICS Live to manage location-specific data
- 4 Returned tools directly to their corresponding departments

## Benefits

- ✓ Ensured zero downtime by calibrating onsite
- ✓ Enabled asset traceability using ICS Live
- ✓ Maintained a clear chain of custody for all tools
- ✓ Handled a high-volume project without bottlenecks

## Results

-  Completed calibration of 500+ torque devices in just one week
-  Improved operational tracking and accountability
-  Delivered logistical efficiency across four facilities
